

Surfaces defined implicitly by functions

A surface in three dimensions can also be implicitly defined by a function of three variables, $f(x, y, z) = 0$. For example, the set of points (x, y, z) that satisfy the following equation

$$x^2 + y^2 + z^2 - 1 = 0$$

defines a sphere of radius 1, centered at the origin. A surface defined implicitly can be visualized using **isosurface** in Matlab. First, we will define a mesh in 3D

```
x = linspace(-2,2,50);  
y = linspace(-2,2,50);  
z = linspace(-2,2,50);  
[X,Y,Z] = meshgrid(x,y,z)
```

$$X =$$

$$X(:, :, 1) =$$
[illegible]

[illegible][illegible]

[illegible]
$$Y(:, :, 2) =$$
[illegible]

[illegible]

end

Notice that we use the `.^` operator since the input arguments to this function can and will be matrices. Now we can call this function and visualize the surface

```
V = sphere(X,Y,Z);  
isosurface(X,Y,Z,V,0)  
axis('equal')
```

Generalization

There are lots of implicit surfaces, but a particularly important group is the quadratic (or quadric) surfaces, defined by the equation

$$Ax^2 + By^2 + Cz^2 + Dyz + Ezx + Fxy + Gx + Hy + Iz + J = 0$$

where A, B, C, D, E, F, G, H, I, and J are all arbitrary constants, some of which may be zero.

Exercise 1: Consider the surface defined by the equation $\frac{x^2}{a^2} + \frac{y^2}{b^2} + \frac{z^2}{c^2} - 1 = 0$

- Write a function that accepts x, y, z, a, b, and c as input and returns the value of the expression on the left hand side.
- Visualize the surface for some different values of a, b, and c.
- What features of the surface do a, b, and c control?

```
V = gen(X,Y,Z,2,1,1);  
isosurface(X,Y,Z,V,0);
```

```
alpha = [2 4 8];
beta = alpha;
cigma = alpha;
%b,c control,do a
for a = alpha
    figure;
    V = gen(X,Y,Z,a,1,1)
    isosurface(X,Y,Z,V,0)
    title('a='+string(a))
    shading flat;
    colorbar
end
```
